FOR IMMEDIATE RELEASE:

Indigo Engineering: A new subsidiary of the Indigo Group

Brussels, Belgium 29 October 2004 – The Indigo group, global provider of SIP-based Communications Platform, has just founded a new company to gather under one single organisation development, maintenance and support activities of the Indigo Software line of products.

Indigo Engineering, the new company will have its headquarters in Brussels with a new CEO but with the Director of Engineering and the technical team transferred from Indigo Software. The main objectives of this new organisation will be to ensure that the high standards and reputation of Indigo in providing state-of-the-art products, solutions and services is continued. Indigo will continue to work in the enterprise, service providers, solution builders and system integrators markets.

The Indigo Group has some ambitious plans to enhance the current product range based on the well known Indigo Communications Server suite as well as to develop new collaboration solutions. With this new organization, the Indigo group will be able to better position itself as one of the major actors in the telecommunications market of today and tomorrow.

“This new company structure will allow us to better concentrate on customer needs and on the evolution of the technology especially in the presence and conferencing areas.” said Nicolas Zastavni, former Director of Engineering at Indigo Software who will hold the same position within Indigo Engineering.

The CEO states, “Creating Indigo Engineering and grouping SIP product development and all support functions in one organisation has created a new synergy. Continuity of the Indigo product portfolio and its extensive set of features are a forgone conclusion. There is now an even greater emphasis on quality and robustness and this is combined with lower response times and improved performance from the test and support teams. Indigo clients and partners can be reassured that the new management and technical teams are determined to ensure not just continuity but product evolution”

"We were especially pleased to learn of the new strategic direction of the Indigo product portfolio", remarked Patrice Haftman, CEO of Infomedia Network. "We selected the Indigo server platform early on for its robustness and presence support. Now with Indigo Engineering concentrating their development on presence and conferencing, we will be able to further expand our presence-based voice and video applications for Telemedicine, Distance Learning, and Enterprise Communications."
